Česká zemědělská univerzita v Praze • CZU Prague

Today and coming days, the aim is not frontal teaching, but something that helps you.
Ask questions.

biorhythms

- a newly founded research group exploring global patterns and evolution of traits along with local adaptations
- using mainly birds as our model species to understand reproduction and mating systems, song and fear;
- all tied together by a common thread: [biorhythms](#) and reproducibility
- we are promoters of open science

biorhythms

- collaborate with institutions and people across the globe

your turn

partici.fi/05826594

The aim of the course is to provide you with

- a fundamental understanding of the science of ecology, its scope, methods, and
- relevance to both basic and applied research.

Gain

- insights into
 - ecological theory,
 - empirical approaches,
 - the role of ecology in addressing pressing global environmental challenges.
- ability to work independently within a team (using individual strength to the teams advantage)
- Experience in
 - working with literature research
 - communication skills
 - time management
- Critical thinking

Hands on learning

Presentation – a back bone of the course

- Practice scientific thinking and clear communication
- Read and synthesize primary literature
- Learn about basic ecological concepts
- Connect classic ideas with modern developments
- Create re-usable study material for peers

Course format

21.10. 10:30 - 12:00 (Z118) Course intro
04.11. 10:30 - 12:00 (Z118) Intro to ecology
08.11. 10:30 - 12:00 (Z118) Intro to Hands on
21.11. 8:30 - 17:00 Excursion
28.11. 8:30 - 17:00 (VN306) Home-work on the topics
05.12. 8:30 - 17:00 (VN306) Symposium (presentations)

Course material

https://github.com/MartinBulla/Ecology_Fund_Gen

PUT THE INFO/NOTE HERE

Presentations **logistics**

- 15 min talk + 15 min moderated discussion
- On key aspects of ecology
 - Topic
 - Papers - traditional and current
- 10 teams of 4-5 people
 - randomly selected
 - all member contribute equally
 - 1 day – reading the papers and literature search
 - 1 day – homework
 - 1 day – preparing the presentation
 - 1 day – presentation and engagement in the discussion (your and presentations of others)
 - all team members present

Presentations **format**

General

- Short intro → main concepts → papers analysis → conclusions
- Describe clearly topic and content of each slide and graphic
- Explain key concepts
- Compare classic **vs.** recent view using the provided papers and your research
- Engage critically with methods, uncertainty, limitations, evidence
- Acknowledge sources of information & visuals
- Deep dive **vs** ChatGPT
- List **who did what** on the final slide

Slides

- Engaging
 - Keep text to minimum
 - Use high visual signal content (pics, photos, diagrams, graphs)
- **Study material for peers**
 - Leave detailed description for notes
 - Dynamic content welcomed, but
 - Export with notes as pdf
- Number of slides **vs** detail **vs** thorough explanation

Engaging slides – rule of thumb: do the slides the way you learn the most when you see a presentation.

Study material – great if slides are dynamic (but either keep non-dynamic version or keep in mind that peers will study from the slide)

Various approaches – one has clear signal content and then many slides are possible

Presentations **evaluation**

- Conceptual understanding and clarity
- Correctness: arguments grounded in evidence
- Engagement: ability to capture audience's attention
- Academic integrity
- Structure: logical and easy to follow
- Timing (15min)
- Ability to discuss and defend your views

clarity, scientific grounding, engagement, and defence of arguments during group presentation at the symposium

Course requirements

Required for admission to the exam - active participation at

- lectures
- excursion
- symposium

Passing the course requires grades 1, 2 or 3 from both:

(1 = 100-90%, 2 = 89-70%, 3 = 69-50%)

- presentation (60%)
- exam (40%)

Active participation in the excursion and the symposium is required for admission to the exam.

Passing the course requires passing (grade 1-3; 1 = 100-90%, 2 = 89-70%, 3 = 69-50%) both components:

(1) Presentation (60%): clarity, scientific grounding,

engagement, and defence of arguments during group presentation at the symposium.

(2) **Exam (40%)**: written test evaluating knowledge of key ecological principles.

The final grade is the weighted mean of the presentation and exam grades (rounded).

1. Eco-evolutionary dynamics & life histories
2. Population ecology essentials
3. Species interactions & coexistence
4. Food webs & network ecology
5. Macroecology & biogeography 1
6. Macroecology & biogeography 2
7. Global change ecology
8. Drivers of biodiversity crisis
9. Biodiversity (ecosystem functioning/services)
10. Applied ecology: New tools & data streams

Classic vs. modern papers

TOPICS & READINGS

PETO, can you create the list

Eco-evolutionary dynamics & life histories

Does the fast-slow continuum adequately capture life history variation across taxa, or do we need multiple axes of life-history strategy?

- **Classic:**
 - Stearns, S. C. (1977). The evolution of life history traits: a critique of the theory and a review of the data. *Annual Review of Ecology and Systematics*, 145–171.
- **Recent:**
 - Stott, I. et al. (2024). Life histories are not just fast or slow. *Trends in Ecology & Evolution*, 39(9), 830–840.

Population ecology essentials

Allee effects: ecological curiosity or fundamental driver of population dynamics?

- **Classic:**
 - Stephens, P. A., Sutherland, W. J., & Freckleton, R. P. (1999). What is the Allee effect? *Oikos*, 185–190.
- **Recent:**
 - Muir, E. J., Lajeunesse, M. J., & Kramer, A. M. (2024). The magnitude of Allee effects varies across mechanisms. *Oikos*, 2024(7), e10386.

Species interactions & coexistence

Top-down control or bottom-up release: Is there evidence for predation's grip on prey numbers?

- **Classic:**
 - Krebs, C. J. et al. (1995). Impact of food and predation on the snowshoe hare cycle. *Science*, 269, 1112–1115.
- **Recent:**
 - Krebs, C. J., Boonstra, R., & Boutin, S. (2018). Understanding the 10-year snowshoe hare cycle. *Journal of Animal Ecology*, 87, 87–100.

Food webs & network ecology

From keystone to rewiring: does food-web complexity build local biodiversity?

- **Classic:**
 - Paine, R. T. (1966). Food web complexity and species diversity. *The American Naturalist*, 100(910), 65–75.
- **Recent:**
 - Bartley, T. J. et al. (2019). Food web rewiring in a changing world. *Nature Ecology & Evolution*, 3, 345–354.

Macroecology & biogeography 1

Latitudinal gradients in biodiversity (and its dimensions) - how and why?

- **Classic:**
 - Willig, M. R., Kaufman, D. M., & Stevens, R. D. (2003). Latitudinal gradients of biodiversity. *AREES*, 34, 273–309.
- **Recent:**
 - Brodie, J. F., & Mannion, P. D. (2023). The hierarchy of factors predicting the LDG. *TREE*, 38(1), 15–23.

Macroecology and biogeography 2

How many species do we actually have on Earth? Why is it so hard to estimate?

- **Classic:**
 - Mora, C. et al. (2011). How many species are there on Earth and in the ocean? PLoS Biology, 9(8), e1001127.
- **Recent:**
 - Wiens, J. J. (2023). How many species are there on Earth? Progress and problems. PLoS Biology, 21(11), e3002388.

Global change ecology

Are we facing a sixth mass extinction?

- **Classic:**
 - Ceballos, G. et al. (2015). Entering the sixth mass extinction. *Science Advances*, 1(5), e1400253.
- **Recent:**
 - Wiens, J. J., & Saban, K. E. (2025). Questioning the sixth mass extinction. *TREE*, 40(4), 375–384.

Drivers of biodiversity crisis

What are the main drivers of the current biodiversity crisis?

- **Classic:**
 - Bar-On, Y. M., Phillips, R., & Milo, R. (2018). The biomass distribution on Earth. PNAS, 115(25), 6506–6511.
- **Recent:**
 - Jaureguiberry, P. et al. (2022). Direct drivers of global biodiversity loss. Science Advances, 8(45), eabm9982.

Biodiversity ↔ ecosystem functioning/services

From services to contributions: valuing nature in a human world

- **Classic:**
 - Costanza, R. et al. (1997). The value of the world's ecosystem services and natural capital. *Nature*, 387, 253–260.
- **Recent:**
 - Díaz, S. et al. (2018). Assessing nature's contributions to people. *Science*, 359(6373), 270–272.

Applied ecology: New tools & data streams

From new dawn to new standard: citizen science in ecology

- **Classic:**
 - Silvertown, J. (2009). A new dawn for citizen science. *TREE*, 24(9), 467–471.
- **Recent:**
 - Fraisl, D. et al. (2022). Citizen science in environmental & ecological sciences. *Nature Reviews Methods Primers*, 2, 64.
